Meatmaster Ooi Inligting

Ooie is van geborte op die veld met slegs klipsout as byvoeding. Ou ooie met lammers gevoer vir maand voor veiling
 Ooie word geselekteer vir parasiet weerstand maar vir u veiligheid is ooie ingespuut met Ecomectin.
 Alle ooie is geënt vir Bloednier pasturella, en ensotiese aborsie en as lammers met Bloutong A,B en C geënt.
 Ooie gedek soos aangedui vanaf 4/11/09 tot 15/12/09, toe is ramme 8570 en 8011 by al die ooie wat nie lammers op die veiling het gesit. 7180 Is toe by die lammer ooie gesit + ooi 3138 tot en met veiling.

Verduideliking van BLUP waarde kodes

Die kode word gegee om jou te help om vinnig te kan waarneem hoe goed of swak die skaap is vir alle teelwaarde einskappe gemeet.

| | |
|---|--------------------------------|
| * | Beste 10% - Uitstekend |
| + | Beste 40% - Baie Goed |
| = | Gemiddeld van die groep - Goed |
| - | Onderste 40% - Aanvaarbaar |
| X | Swakste 10% |

BLUP waarde en verwagte resultate:

Die BLUP waarde is baie meer akkuraat as die indeks waarde en dus sal u baie vinniger vordering maak as u meer waarde heg aan die BLUP syfer as aan die individuele skaap se indeks.

| | |
|------------------------------------|---|
| Speen Dir : | Maak jou skape swaarder met direkte groei tot op speen ouderdom. |
| Speen Mat : | Sal veroorsaak dat jou ooie meer melk het en lammers in die algemeen goed versorg. |
| Na Speen Dir : | Sal jou skape swaarder maak met die ram se eie vermoë om te kan groei van na speen tot 12 maande. |
| Tw | ; Dit is die vermoë wat die skaap het om meerlinge te kan prodiseer |
| R/s - Jou Rand sent Waarde: | Hierdie is 'n belangrike waarde en gee jou die vermoë om skaap te selekteer wat die profyt van jou stoet kan verhoog of verlaag. Sou jy produksie wou verhoog deur verhoogde inset koste moet u self bereken of dit die moeite werd is. In ons geval word die stoet onder totaal natuurlike toestande bestuur en is inset koste onsettend laag met geen lekke of enige byvoeding, en kan die R/s waarde gebruik word vir baie akkurate seleksie onder hierdie omstandighede |

Index: Verwagte Resultate

Moet na gekyk word saam met die BLUP waarde syfer om te help verseker dat die regte skaap aangekoop word.

| | |
|-------------------------|---|
| Speen Indeks: | Dit gee jou die vermoë van die skaap om te kan groei vanaf geboorte tot speen ouderdom van 100 dae Dit vergelyk die lam met die res van die lammers in sy groep en 100 is altyd die gemiddeld. |
| Na Speen Indeks: | Dit gee jou die vermoë van die skaap om te kan groei vanaf speen tot 'n ouderdom van 12 maande in vergelyking tot die res van die lammers in sy groep. 100 is altyd die gemiddeld. |
| EPI Indeks: | Dit is die waarde wat gebruik moet word om ooie vir reproduksie en lam gewigte te selekteer. Ooie wat in dieselfde seisoen gebore is word saam gegroep en met mekaar vergelyk. Van hierdie ooie word die Totale Gewig lammers gespeen (enkel, tweeling en drieling almal saam) bereken. Die beste (en ook die swakste) ooie in elke ouderdoms groep word met die OPI-Index geïdentifiseer. 'n Waarde van 100 word as die gemiddelde aanvaar. 'n OPI-Index van 106 beteken dat daardie ooi se OPI 6% bokant die gemiddelde OPI van alle ooie in haar ouderdomsgroep was. |
| Mean L Indeks: | Die waarde word gebruik om te sien hoe ooie hulle lammers grootmaak. Dit is die gemiddelde indeks van al die ooie se lammers. In hierdie geval word die lammers se gewig gekorrigeer, slegs vir ouderdom en geslag maar nie vir meerlinge nie, dus sal ooie met baie meerlinge altyd 'n laer indeks hê. |

Afkortings

| | |
|--------------------|---|
| Age 1st Lam | Dit is haar ouderdom in dae tot eerste lam |
| ILP: | Dit is die ooi se tussen lam periode in dae |
| No. TL | Getal lam kansse van die ooi |
| No LW | Aantal lammers gespeen |
| F / Gen | : Die generasies van suiwer teeling |
| 100D - Ind | : 100 Dae index |
| Sp - Dir | : Speen direk BLUP waarde |
| NaS - Ind | : Na speen of 270 dae index |
| NaS - Dir | : Na speen direkte BLUP waarde |
| Sp - Mat | : Speen matrenale waarde |
| R/c - Rev | : Rand / sent waarde |

Meatmaster Ewe Information

All Meatmaster ewes run year round only on veldt with rock salt. Sale ewes with lambs fed for month before sale. Ewes are selected for resistance against parasites, but for your safety they were injected with *Ecomectin*. Ewes mated as stated from 4/11/09 to 15/12/09. Rams 8570 & 8011 then put to ewes without lambs, ewes with lambs + 3138 put to 7180 all up until date of sale. All the ewes were inoculated for pulpy kidney, enteric abortion & pasturella, and as lambs for Bluetongue A, B & C

Explanation of the BLUP value Codes

The code is given to help you quickly see how good or poor the sheep is for every production trait measured.

| | |
|---|-----------------------------|
| * | Best 10% - Excellent |
| + | Best 40% - Very Good |
| = | Average of the group - Good |
| - | Bottom 40% - Acceptable |
| X | Weakest 10% |

BLUP values and the Expected results

The BLUP value is always a lot more accurate than the index values thus you will make much faster progress if you pay more attention to the BLUP value rather than the individual sheep's index.

| |
|--|
| Wean Direct: Will make your sheep heavier with direct growth up to weaning age of 100 days |
| Wean Maternal : Will improve your ewes milk but above all will help you select ewes that will generally look after their lambs better. |
| Post Wean Direct: Will give your sheep the ability to grow better from weaning to an age of 12 months. |
| Tw : The ability the sheep has to give multiple births. |
| R/c - Your Rand cent Value: This is an important value and indicates to you the ability the sheep has to increase or decrease the amount of money you make. Should you increase input costs to improve production you should calculate whether this is profitable for you or not. In our case sheep are run naturally with no licks or feeding thus minimal input costs giving you a very accurate R/c figure to select for. |

Index: Expected Results

To look at with the BLUP values to better assess the true value of an individual sheep

| |
|--|
| Wean Index: This gives you the potential of the sheep to be able to grow from birth to weaning at a 100 days. It compares the lamb to the rest of the lambs in its group and a 100 indicates the average. |
| Post Wean Index: This gives you the potential of the sheep to be able to grow from after weaning to an age of 12 months. It compares the lamb to the rest of its group and again a 100 indicates the average. |
| EPI Index: This is the value used to determine a ewe's fertility and weight of lam. Ewes born in the same season are grouped together. The total weight of lambs weaned (singles, twins and triplets are all added together) of these ewes are calculated and values given as an EPI Index. Each age group is therefore compared separately. The best to the poorest ewes in that group are then identified by the EPI Index where 100 is the mean. A EPI Index of 106 means that the ewe's EPI was 6% above the average. |
| Mean L Ind: This is a value given to determine how well a ewe rears her lambs. This is the average index of all the ewes' lambs. In this case the lamb's weight is corrected for age and sex only but not for multiple births, thus ewes with many twins will always have a lower index. |

Abbreviations

| | |
|-------------------------------|---|
| Age 1st Lam | This is her age in days to when she lambs for the first time |
| ILP : | This is the ewe's inter-lambing period in days from one lamb to the next. |
| No TL : | Number of lambing chances |
| No LW : | Number of lambs weaned |
| F / Gen : | The generations of pure breeding |
| 100D / Ind : | 100 Day index |
| Sp / Dir : | Wean direct BLUP value |
| NaS / Ind : | Post wean or 270 day index |
| NaS / Dir : | Post wean direct BLUP value |
| Sp / Mat : | Wean maternal value |
| R/c - Rev : | Revenue value |

MEATMASTER EWES / MEATMASTER OOIE

Groep nommers dui aan hoe lottte gekombineer is om saam te verkoop. Sou 'n bot hoër wees as R1 500, mag die hoogste biebër 'n individuele lot selekteer. Indien laer as R1 500 moet die hele groep geneem word.
Group numbers indicate lots that are grouped together. If the price exceeds R1 500 the buyer has the option to choose an individual lot. If the price is lower than R1 500 the whole group must be taken.

| RAMME Lot 61 tot 88 | | | | | | | | | | | | | | | | | | | |

Meatmaster Ram Inligting

Alle ramme is van geborte af net op die veld aangehou met slegs klipsout as byvoeding.

Al die ramme wat self gebruik was, was November tot einde Desember onder die ooie.

Ramme word geselekteer vir parasiet weerstand maar vir u veiligheid is ramme ingespuut met Ecomectin. Ramme geteel uit kudde ooie word onsettend streng gekeur en slegs ramme gebore in die eerste twee weke wat uitstekend groei word gehou. Hierdie ramme het geen moeder inligting in katalogus.

Alle ramme is geënt vir Bloednier en Rev 1, gedoseer en as lammers met Bloutong A,B en C geënt.

Alle ramme is getoets vir Brucilla ovis en ander geslag siektes. Vrugbaarheid is ook getoets.

Verduideliking van BLUP waarde kodes

Die kode word gegee om jou te help om vinnig te kan waarneem hoe goed of swak die skaap is vir alle teelwaarde einskappe gemeet.

| | |
|---|--------------------------------|
| * | Beste 10% - Uitstekend |
| + | Beste 40% - Baie Goed |
| = | Gemiddeld van die groep - Goed |
| - | Onderste 40% - Aanvaarbaar |
| X | Swakste 10% |

BLUP waarde en verwagte resultate:

Die BLUP waarde is baie meer akkuraat as die indeks waarde en dus sal u baie vinniger vordering maak as u meer waarde heg aan die BLUP syfer as aan die individuele skaap se indeks.

Speen Dir : Maak jou skape swaarder met direkte groei tot op speen ouderdom.

Speen Mat : Sal veroorsaak dat jou ooie meer melk het en lammers in die algemeen goed versorg.

Na Speen Dir : Sal jou skape swaarder maak met die ram se eie vermoë om te kan groei van na speen tot 12 maande.

Tw ; Dit is die vermoë wat die skaap het om meerlinge te kan prodiseer

R/s - Jou Rand sent Waarde: Hierdie is 'n belangrike waarde en gee jou die vermoë om skaap te selekteer wat die profyt van jou stoet kan verhoog of verlaag. Sou jy produksie wou verhoog deur verhoogde inset koste moet u self bereken of dit die moeite werd is. In ons geval word die stoet onder totaal natuurlike toestande bestuur en is inset koste onsettend laag met geen lekke of enige byvoeding, en kan die R/s waarde gebruik word vir baie akkurate seleksie onder hierdie omstandighede

Index: Verwagte Resultate

Moet na gekyk word saam met die BLUP waarde syfer om te help verseker dat die regte skaap aangekoop word.

Speen Indeks: Dit gee jou die vermoë van die skaap om te kan groei vanaf geboorte tot speen ouderdom van 100 dae. Dit vergelyk die lam met die res van die lammers in sy groep en 100 is altyd die gemiddeld.

Na Speen Indeks: Dit gee jou die vermoë van die skaap om te kan groei vanaf speen tot 'n ouderdom van 12 maande in vergelyking tot die res van die lammers in sy groep. 100 is altyd die gemiddeld.

Dit is onsettend **belangrik** vir u om 'n Meatmaster te selekteer wat by **u toestande** sal aanpas byvoorbeeld:

Sou u boer onder baie gunstige toestande sal dit tot u voordeel wees om skaap te selekteer met baie goeie vrugbaarheid en sodoende u R/s waarde verhoog. Sou u op die ander kant onder baie moeilike toestande met die ras wil boer sou dit beter wees om enkelinge te selekteer van ooie wat hulle baie goed grootmaak aangesien tweeling nie sal kan oorleef. Op die manier sou u weer u R/s waarde kan verhoog.

Ons area is baie gemiddeld dus kan skaap wat goed groei en skaap wat vrugbaar is help om ons R/c waarde te verhoog
KEN DUS U OMSTANDIGHEDE OM DIE REGTE SKAAP TE SELEKTEER.

Afkortings

| R/c - Rev | : Rand / sent waarde |

Meatmaster Ram Information

All Meatmaster rams from birth run only on veldt with rock salt as their only supplement.

All Rams used for own use where in amongst the ewes from November to end of December.

Rams are selected for resistance against parasites, but for your safety they were injected with *Ecomectin*.

Grade Rams from our commercial herds are extremely strictly classed and only the cream born in the first two weeks that had the best growth are kept. These rams have no mother information in the catalog.

All the rams were inoculated for Pulpy Kidney and Rev 1, and as lambs for Bluetongue A, B and C.

All rams have been tested for *Brucilla ovis* and other sexually transmitted diseases. Rams are also tested for fertility.

Explanation of the BLUP value Codes

The code is given to help you quickly see how good or poor the sheep is for every production trait measured.

| | |
|---|-----------------------------|
| * | Best 10% - Excellent |
| + | Best 40% - Very Good |
| = | Average of the group - Good |
| - | Bottom 40% - Acceptable |
| X | Weakest 10% |

BLUP values and the Expected results

The BLUP value is always a lot more accurate than the index values thus you will make much faster progress if you pay more attention to the BLUP value rather than the individual sheep's index.

| |
|--|
| Wean Direct: Will make your sheep heavier with direct growth up to weaning age of 100 days |
| Wean Maternal : Will improve your ewes milk but above all will help you select ewes that will generally look after their lambs better. |
| Post Wean Direct: Will give your sheep the ability to grow better from weaning to an age of 12 months. |
| Tw : The ability the sheep has to give multiple births. |
| R/c - Your Rand cent Value: This is an important value and indicates to you the ability the sheep has to increase or decrease the amount of money you make. Should you increase input costs to improve production you should calculate whether this is profitable for you or not. In our case sheep are run naturally with no licks or feeding thus minimal input costs giving you a very accurate R/c figure to select for. |

Index: Expected Results

To look at with the BLUP values to better assess the true value of an individual sheep

| |
|---|
| Wean Index: This gives you the potential of the sheep to be able to grow from birth to weaning at a 100 days It compares the lamb to the rest of the lambs in its group and a 100 indicates the average. |
| Post Wean Index: This gives you the potential of the sheep to be able to grow from after weaning to an age of 12 months. It compares the lamb to the rest of its group and again a 100 indicates the average. |

It is extremely important to select a Meatmaster that will do well under your specific conditions, for example:

If you farm under very good conditions you can improve your R/c value by selecting for fertility and multiple births.

If you however farm under difficult extensive conditions it will be better for you to select for single lambs that grow very well, as twins will under these conditions probably die or not perform at all. Thus your R/c will improve by selecting for growth rather than fertility. Our area is very average thus good growers and fertility are capable of giving us the best R/c value

KNOW YOUR CONDITIONS TO ENABLE YOU TO SELECT THE CORRECT SHEEP !
